

FRESH FILTERED COFFEE

WMF's WORLD PREMIERE

THE FINEST FILTERED COFFEE,
FRESHLY BREWED CUP BY CUP.

With WMF's innovative Fresh Filtered Coffee option, for the first time you can serve fine coffee specialities and delicious fresh filtered coffee from a single machine! Thanks to our new filter capsule system, each cup is freshly brewed from aromatic coffee beans and then smoothly filtered to remove sediment and oils. Because the system ensures a constant temperature and volume, every cup of filtered coffee is as wonderfully flavourful and fresh as the last.

DESIGNED TO PERFORM

wmf.com

THE FRESH FILTERED COFFEE TECHNOLOGY

The first stage always involves a freshly ground and brewed café crème or espresso, which makes its way through the new filter capsule by diffusing through the membrane in the filter element. This ensures that any unwanted sediment and oils are removed, and produces a fresh result. The coffee then flows back to the machine spout and into the cup. Optional milk systems such as WMF Dynamic Milk make it possible to add hot or cold milk or milk foam exactly as required. The machine performs all other processes automatically without the need for any input from the user. This includes a sophisticated, sensor-controlled monitoring concept that keeps an eye on various parameters and checks whether the filter system is in the correct position and working properly.

AVAILABLE FOR:

WMF 5000 S+

WMF 1500 S+

YOUR BENEFITS OF FRESH FILTERED COFFEE:

- Coffee specialties and fresh filtered coffee from a single machine
- Always fresh filtered coffee of the highest quality, thanks to the constant temperature, volume and flavour
